

The Importance of Maintenance

When does your cooling system break down?

For Jane, it happened in the middle of a hot summer night. She awoke to find her thermostat at 84°F!

Exhausted and sweaty, Jane called several HVAC companies and finally found one that offered emergency repair services.

The technician found many issues with Jane's AC since it rarely received maintenance. Jane found herself staring at the large price tag of the emergency repair bill, wondering what she was going to do next.

The technician asked Jane if she had a HVAC maintenance membership. When she said no, they explained how memberships help homeowners get regular maintenance for their cooling & heating systems and help them budget for future needed repairs or replacements.

Jane signed up for a maintenance membership to make sure her AC starts getting the attention it needs and is better prepared for if she has to replace it in the future.

Memberships Guide
